Passenger Cars and Trucks Universal Joint Kits and Center Bearings

Tested. Proven. Trusted. Driven.
Our most comprehensive listing of Spicer® universal joint kits and center bearings for passenger cars and trucks.

SPICER®

Spicer Life® Series (SPL®) U-Joints:
Premium Performance
for Your Vehicle.

FATIGUE TESTING: 1310 SERIES U-JOINTS

SPICER®

Spicer 10® Series u-joints performed more than **2X** better than the closest competitor

Spicer Life® Series u-joints are in a league of their own

U-JOINT KIT TEST RESULTS • AVERAGE CYCLES TO FAILURE – BASED ON SAMPLES TESTED IN 2017

FATIGUE TESTING: 1330 SERIES U-JOINTS

SPICER®

Spicer 10® Series u-joints performed more than **2X** better than the closest competitor

Spicer Life® Series u-joints are in a league of their own

U-JOINT KIT TEST RESULTS • AVERAGE CYCLES TO FAILURE – BASED ON SAMPLES TESTED IN 2017

Spicer 10® Series U-Joints:
Superior Quality
for Longer Life.

GENERAL SAFETY INFORMATION

To prevent injury to yourself and/or damage to the equipment:

- Read carefully all owners manuals, service manuals, and or other instructions.
- Always follow proper procedures and use proper tools and safety equipment.
- Be sure to receive proper training.
- Never work alone while under a vehicle or while repairing or maintaining equipment.
- Always use proper components in applications for which they are approved.
- Be sure to assemble components properly.
- Never use worn-out or damaged components.
- Always block any raised or moving device that may injure a person working on or under a vehicle.
- Never operate the controls of the power take-off or other driven equipment from any position that could result in getting caught in the moving machinery.

WARNING

Rotating Auxiliary Driveshafts

- Rotating auxiliary driveshafts are dangerous. You can snag clothes, skin, hair, hands, etc. This can cause serious injury or death.
- Do not go under the vehicle when the engine is running.
- Do not work on or near an exposed shaft when the engine is running.
- Shut off engine before working on power take-off or driven equipment.
- Exposed rotating driveshafts must be guarded.

WARNING

Warning: Using Set Screws

Auxiliary driveshafts may be installed with either recessed or protruding set screws. If you choose a square head set screw, you should be aware that it will protrude above the hub of the yoke and may be a point where clothes, skin, hair, hands, etc. could be snagged. A socket head set screw, which may not protrude above the hub of the yoke, does not permit the same amount of torquing as does a square head set screw. Also, a square head set screw, if used with a lock wire, will prevent loosening of the screw caused by vibration. Regardless of the choice made with respect to a set screw, an exposed rotating auxiliary driveshaft must be guarded.

WARNING

Warning: Guarding Auxiliary Driveshafts

We strongly recommend that a power take-off and a directly mounted pump be used to eliminate the auxiliary driveshaft whenever possible. If an auxiliary driveshaft is used and remains exposed after installation, it is the responsibility of the vehicle designer and P.T.O. installer to install a guard.

This symbol warns of possible injury.

Get the right u-joint right away. With the Spicer® Yoke Ruler, you can quickly and easily measure a driveshaft yoke to determine the series of a driveshaft and then refer to the chart to the right to determine the correct u-joint kits for that series. This guide shows you how to find the part you need, no matter what information you have in front of you. **NOTE:** The Spicer Yoke Ruler is used to determine the series of driveshaft that is compatible with your yoke. Measurements for u-joint kits should be made with a caliper or micrometer and determined by using the dimensional charts in Spicer's K350 catalog.

How to Measure a Yoke

This section will demonstrate how to use the Spicer Yoke Ruler to determine the correct Spicer driveshaft series when all you have is a yoke from a driveshaft. **NOTE:** This ruler will only measure Spicer Series yokes and is not inclusive of all driveshaft series. Refer to chart on the next page for u-joint kit number choices.

With a Full-Round Driveshaft Yoke

1. Measure from the outside of the yoke ears as shown
2. The correct driveshaft/u-joint series will be indicated on the opposite ear – **1310 in this example**

The correct u-joint kit options are listed in the chart to the right, and include **5-153X** (Spicer service kit – greaseable), **5-1310-1X** (Spicer Life/SPL greaseable), and **5-1310X** (Spicer Life/SPL non-greaseable). **For measurements showing multiple series, refer to the K350 catalog.**

With a Half-Round Driveshaft Yoke

1. Measure from the inside of the tab as shown
2. The correct driveshaft/u-joint series will be indicated on the opposite tab – **SPL170 in this example.**

For measurements showing multiple series, refer to the K350 catalog.

With a Wing™ Series Yoke

1. Measure across the inside of the pilot diameter.
CAUTION: Make sure your ruler is directly over the center of the bolt holes on the yoke as shown
2. Read result on **opposite** pilot diameter
3. Wing™ Series u-joint kit part numbers can be found in the Wing™ Series brochure (J3312-WINGBRO-52105) available at www.SpicerParts.com/library

Measuring U-Joint Kits *(Spicer Yoke Ruler does not apply.)*

The illustrations below show appropriate measurements required to identify the most common styles of u-joint kits. Illustrations for the other styles of u-joint kits can be found in the last section of the K350 catalog. We recommend using a caliper or micrometer to most accurately measure u-joints. U-Joint caps must be compressed when measuring dimension over the caps. Once you have recorded your measurements, refer to the dimensional charts by u-joint type which can be found in the last section of the K350 catalog. The K350 catalog can be downloaded from our online library, located at www.SpicerParts.com/library.

Spicer® parts are there when you hit the trail—and when the trail hits back. No matter what conditions you throw at your 4WD vehicle, trust non-greaseable Spicer SPL® U-joints with the triple lip seal for premium performance. And when you need it, Spicer 4WD u-joint performance packs have everything for a complete u-joint change-out—with just one part number to order. For a complete listing of applications, please visit www.SpicerParts.com/literature and download the catalog “K350-1-DSSP” from the driveshaft section.

To help you find the Spicer u-joints you need for your vehicle, we have developed these performance u-joint charts. Simply follow these instructions. 1. Use the Kit Numbers by Make charts on the right to find the kit number that matches your year, make, and model. 2. Find your kit part number on the chart below. 3. Read across the chart to determine which drawing (DWG) corresponds to your kit. 4. Locate the u-joint that corresponds to the position you need.

Trust Spicer® lubricant to protect your universal joint and slip assemblies. Lack of proper lubrication is the most common cause of premature failure in u-joint kits and slip assemblies. Properly sized Spicer® u-joints that are adequately lubricated at recommended intervals will normally meet or exceed fleet operational requirements. Inadequate lube cycles, and failure to lubricate the u-joints and slip splines properly, will not only cause premature u-joint kit failures, but may lead to other problems, such as slip spline seizures. Relubrication at recommended intervals (**see Chart 5**) flushes abrasive contaminants from the u-joints and slip components, helping to optimize the life of the driveshaft.

There Is No Substitute for Spicer Products — Including Spicer® Lubrication.

Spicer products are manufactured to original equipment specifications, and Spicer ultra-premium synthetic grease is specifically engineered to complement Spicer® universal joints. You can rely on Spicer products to deliver the premium performance that keeps your vehicle on the road.

Dana recommends lubrication with Spicer ultra-premium synthetic grease or Chevron Ultra-Duty EP-2 or a compatible lithium-based grease meeting N.L.G.I. Grade 2 specifications as well as ASTM D4950 LB specifications. Spicer ultra-premium synthetic grease is compatible with all NLGI-2 greases, and delivers professional-grade quality, even at high temperatures. Spicer ultra-premium synthetic grease is available in 10-packs of 14-oz. tubes (SPL1051), and 1-gal. pails (SPL1052).

⚠ WARNING: Inadequate lubrication can cause driveline failure, which can result in separation of the driveline from the vehicle. A separated driveline can result in serious injury or death.

In order to minimize the potential for driveline failure, including driveline separation, you must:

1. Carefully review the lubrication specifications in this brochure and lube manual located at www.SpicerParts.com/literature/library.
2. Make sure you use only approved lubricants. We recommend Spicer® ultra-premium synthetic grease.
3. Make sure you lubricate at recommended intervals.

Visit www.SpicerParts.com/videos to see how-to videos on proper u-joint kit lubrication procedures.

U-Joint Kit Lube Procedures

⚠ WARNING: To prevent serious eye injury, always wear safety glasses when lubricating or servicing a driveshaft. Failure to wear safety glasses could result in serious injury and/or partial or permanent vision loss.

Spicer® greasable u-joint kits contain only enough grease to provide needle bearing protection during storage. Prior to installing a new u-joint into the driveshaft, you must:

1. Remove each bearing assembly and pack each journal cross lube reservoir with grease.
2. Wipe a liberal coating of the same grease into each bearing assembly, filling all of the cavities between the needle rollers.
3. Apply a liberal coating of grease into the bottom of each bearing cup.

After installation into a driveshaft, and prior to being placed into service, you must (with the exception of Service-Free u-joints) lubricate each u-joint kit in accordance with the following recommendations:

- Apply grease gun pressure to each u-joint until fresh grease appears at each bearing seal. This purging action not only assures that every bearing has been properly greased, but flushes out any moisture and abrasive contaminants that may have worked their way past the seals.

IMPORTANT: The premium seal design of Spicer u-joints may, on occasion, prevent one or more bearings from purging. If that should ever happen, try one of these purging procedures to relieve seal tension:

1. Push up on the driveshaft, from the side opposite the bearing that will not purge, while applying gun pressure to the lube fitting. This might create a slightly greater clearance around the bearing's sealing surface and may allow the bearing to purge (**see Photo 1**).
2. Using a brass hammer and wearing safety glasses, sharply strike lug ear of the inboard yoke once to firmly seat the bearing against the retainer (retainer may be a snap ring, bearing plate or spring tab). Striking the yoke ear may relieve tension across the span. Rotate shaft 180 degrees and repeat procedure on opposite lug ear. Apply grease gun pressure. If the problem still persists move on to steps 3 and 4.
3. Depending on the type of yoke design in your driveshaft, release pressure on the affected bearing(s) as follows:

A. On full round Spicer® 10 Series™ closed hole yokes with self-locking bolts and bearing plates (**see Figures A and B**):

- Release seal pressure by loosening the bolts that retain the non-purging bearing cap(s) in the yoke ear(s). Apply grease gun pressure to purge the bearing or bearings.
- If loosening the bolts does not allow purging, remove the bearing(s) to determine the cause of blockage. (Refer to Bolt Installation Procedures section covering the reinstallation of any loosened or removed bolts.)

Photo 1

Figure A

Figure B

U-Joint Kit Lube Procedures (continued)

B. On full round Spicer Life Series® or SPL® closed hole style yokes with inboard bearings that are retained by spring tabs, you should never loosen the spring tabs to release seal pressure on the bearing seals (**see Figure C**). SPL® u-joint kits with bearings that will not purge must be removed and replaced with a new kit.

- Refer to **Chart 1** for bolt torque for spring tab bolts.

Figure C

Spring Tab Bolt Torques - Chart 1

SERIES	SPRING TAB KIT P/N	BOLT P/N	THREAD SIZE	BOLT TORQUE (Lb. Ft.)	BOLT TORQUE (NM)
SPL140/SPL170/SPL250	211941X	8-73-114M	M8X1.00-6G	28	38

NOTE: If you must remove the u-joint kit from the driveshaft yoke and replace it with a new kit, refer to SPL® Service Manual No. DSSM 0100 for u-joint kit installation instructions. Service manual DSSM 0100 can be found at: www.SpicerParts.com/literature/library, keyword search: DSSM 0100.

C. For light-duty Spicer® 10 series™ and SPL350 series using full round yokes with snap rings on the inboard bearings, the u-joint kit must be removed from the driveshaft and replaced. Releasing seal pressure cannot be done safely without removal of the u-joint kit.

CAUTION: ALWAYS replace any loosened or removed bolts with a NEW BOLT. Refer to Bolt Installation Procedures section for instructions.

4. On half round type yokes with bearing retainers or bearing straps:

- Release pressure by removing the retainer or strap and unhooking the end of the driveshaft from the yoke ears.

CAUTION: Driveshafts are extremely heavy. Always use a restraining strap to prevent them from falling out of the vehicle.

- With the driveshaft hanging on the restraining strap, install a C-clamp around the non-purging bearings and apply grease gun pressure until they purge. Loosen the C-clamp as necessary to force purging. If the bearing(s) still fail to purge, remove the u-joint kit from the driveshaft and replace it.

IMPORTANT: Vehicles in service MUST be re-lubed at specific intervals. Refer to the lube interval chart on the back of this brochure for recommendations regarding lube cycles vs. specific applications.

New Spicer® Service-Free (SF) light-duty and medium-duty u-joints are shipped pre-lubed, with the bearings installed on the cross trunnions. It is not necessary to grease them after installation.

Spicer Life Series® (also referred to as SPL®) heavy-duty service-free u-joint kits (SPL 170, SPL250, SPL350 series part numbers with a SF suffix - i.e. SPL250-SF3X) are supplied with a predetermined amount of Spicer synthetic grease, which must be added to the journal cross and bearing caps prior to assembly into the driveshaft yokes.

PROCEDURE: Fill each journal cross with grease. Wipe the remaining grease into each bearing cap, filling the cavities between the needle bearings. Wipe a liberal amount of grease on the bottom of each bearing.

CAUTION: When you remove the SF bearings from the cross trunnions, some grease may be sucked out of the cross reservoir. ALWAYS make sure you reinstall the same bearing back onto the same cross trunnion when installing the u-joint into the driveshaft yoke.

Bolt Installation Procedures

(Refer to **Charts 1, 2, 3,** and **4** for kit numbers, bolt part numbers, and recommended torques.)

CAUTION: If you have removed or loosened any bearing cap fasteners, ALWAYS replace them with new fasteners and torque them to the recommended torque shown on **Charts 2, 3,** and **4.** If your 10 Series™ retention method was a stamped bearing strap, ALWAYS replace the used bearing strap with a new bearing strap. (**NOTE:** Bearing retainers used with Spicer Life Series® or SPL® driveshafts can be reused if they are not damaged. Refer to **Chart 2** and **Figure E** for recommendations on the proper tightening sequence for bearing strap and retainer bolts.)

Bearing Strap and Bearing Retainer Bolt Torques - Chart 2

SERIES	STRAP/RETAINER KIT P/N	BOLT P/N	THREAD SIZE	BOLT TORQUE (Lb. Ft.)	BOLT TORQUE (NM)

* Retainer kit with cast retainer

Spicer® 10 Series™ and SPL® driveshafts are usually retained in the vehicle with either bearing strap kits or bearing retainer kits that utilize self-locking bolts, which have a lock patch (see **Figure D** and **Chart 2**).

On some Spicer® 10 Series™ u-joint kits, the bearing assemblies use a bearing plate welded to the bearing assembly and bolted to the yoke ear with self-locking bolts that have a serrated head and a lock patch (see **Figure A**). Serrated head and a lock patch installation procedure: Loosely install the NEW bolts, and then tighten them to the torque shown in **Chart 3** (see **Warning**).

Serrated Head Style Bolt Torques - Chart 3

SERIES	BOLT P/N	THREAD SIZE	BOLT TORQUE (Lb. Ft.)	BOLT TORQUE (NM)
1610	5-73-709	.312-24	30	41
1710	6-73-209	.375-24	43	58
1760	6-73-209	.375-24	43	58
1810	6-73-209	.375-24	43	58
1880	7-73-315	.438-20	65	88

For maximum performance, the torque specifications and sequences should be followed during the original installation and re-installation of components. Dana recommends using new hardware during any service procedure.

Figure E

Torque bolts in a counter clockwise sequence starting with either position 1.

Figure D

Figure A

Bolt Installation Procedures (continued)

Some are retained with self-locking bolts that have a non-serrated head and lock patch and use a lock strap (see **Figure B**). Non-Serrated head with lock patch and lock strap installation procedure: Loosely install the NEW bolts, and then tighten them to the torque shown in **Chart 4**. After tightening to the proper torque, bend the tabs of the lock straps up against the bolt heads to lock the bolts in place (see **Warning**).

Non-Serrated Head Style Bolt Torques - Chart 4

SERIES	BOLT P/N	LOCK STRAP PART #	THREAD SIZE	BOLT TORQUE (Lb. Ft.)	BOLT TORQUE (NM)

1760	6-73-109	230323	.375-24	36	49
1800	6-73-109	98-743	.375-24	36	49
1810	6-73-109	230323	.375-24	36	49
1880	7-73-115	231009	.438-20	58	79

Figure B

Refer to Spicer Driveshaft Service Manual (DSSM-3264 or newer) for additional installation instructions.

⚠ WARNING: Failure to replace self-locking and/or serrated head bolts and/or failure to properly torque any retaining bolt, or failure to properly bend the lock tabs on lock strap-style installations could cause the driveshaft to loosen and separate from the vehicle or machine, which could cause loss of control and result in personal injury or death.

Additional Lubrication Procedures

Spicer 10 Series™ Slip Assemblies

- Re-lube slip assemblies at the same intervals, and with the same lube, as u-joint kits.
- Apply grease gun pressure until fresh grease appears at the pressure relief hole in the slip yoke plug (see **Photo 2**).
- Cover the hole in the plug with your finger and continue applying grease gun pressure until fresh grease appears at the slip yoke seal (see **Photo 3**).
- **NOTE:** In cold winter months, new grease in a slip assembly can stiffen and cause the slip yoke plug to pop out of the slip yoke bore.
 - Activate the slip spline by driving the vehicle enough to displace a little grease out of the pressure relief hole.
 - Failure to complete this recommendation can lead to premature failure of the slip assembly if the slip yoke plug is lost.

Photo 2

Photo 3

Additional Lubrication Procedures (continued)

SPL® Slip Assemblies (with boots):

- SPL® slip assemblies are lubed for life and do not require additional lube.
- Any damage to the boot, or any loss or damage to any of the boot clamps, will require the replacement of the entire boot kit assembly. Refer to SPL® service manual DSSM 0100 for instructions on cleaning and re-greasing the slip assembly and installation of the new boot.
- SPL® boot kits come with a sealed package of grease containing the 4 ounces of Chevron Ultra-Duty EP-2 lubricant. No additional grease needs to be added.

Center Bearing Assemblies:

- Lubrication of the bearing itself takes place during its manufacturing process and no attempt should be made to add or change the grease within the bearing itself.

Spicer® XC™ Center Bearings:

- Driveshafts with Spicer® XC™ center bearing assemblies do not require any lubrication within the bearing or to the bearing outer surface due to the maintenance-free double lip seal within the bearing itself. Please refer to bulletin JOI-TEC-56 for installation procedures which can be found at www.SpicerParts.com/literature.

⚠ WARNING: Rotating shafts can be dangerous. You can snag clothes, skin, hair, hands, etc. This can cause injury or death. Do not go under the vehicle when the engine is running.

Spicer® Driveshaft Lubrication Intervals - Chart 5

Series	City	On-Highway	Linehaul	On/Off-Highway
Spicer® 10 Series™ (1310 thru 1810) Slip members also require lubrication.	5,000/8,000 mi. (8,000/12,800 km) or 3 months (whichever comes first)	10,000/15,000 mi. (16,000/24,000 km) or 3 months (whichever comes first)	10,000/15,000 mi. (16,000/24,000 km) or 3 months (whichever comes first)	5,000/8,000 mi. (8,000/12,800 km) or 3 months (whichever comes first)
Spicer Life Series®: Light-Duty (1310 thru 1410) Slip members are booted and permanently lubricated. Always inspect boots and clamps at every lube interval.	15,000 mi. (24,000 km) or 6 months (whichever comes first)	15,000 mi. (24,000 km) or 6 months (whichever comes first)	15,000 mi. (24,000 km) or 6 months (whichever comes first)	15,000 mi. (24,000 km) or 6 months (whichever comes first)
Spicer Life Series®: Medium-Duty* (SPL55, SPL70 & SPL100) Slip members are booted and permanently lubricated. Always inspect boots and clamps at every lube interval.	25,000 mi. (40,000 km) or 6 months (whichever comes first)	25,000 mi. (40,000 km) or 6 months (whichever comes first)	25,000 mi. (40,000 km) or 6 months (whichever comes first)	25,000 mi. (40,000 km) or 6 months (whichever comes first)
Spicer Life Series®: (OE Production SPICER LIFE XL Driveshafts ONLY) (SPL170, SPL250, SPL350 ONLY) FIRST LUBE CYCLE = 350,000 miles or 3 Years (whichever comes first). Slip members are booted and permanently lubricated. Always inspect boots and clamps at every lube interval.				
Spicer Life Series®: Heavy-Duty* (SPL140 - All Lube Intervals) (SPL170, SPL250, SPL350 - All Lube Intervals after the First Lube cycle listed above) Slip members are booted and permanently lubricated. Always inspect boots and clamps at every lube interval.	25,000 mi. (40,000 km) or 6 months (whichever comes first)	100,000 mi. (160,000 km) or 6 months (whichever comes first)	100,000 mi. (160,000 km) or 6 months (whichever comes first)	25,000 mi. (40,000 km) or 6 months (whichever comes first)

Spicer Life® SF™ Lubrication Cycle

Spicer Life SF™: Service-Free
 (Spicer u-joint part numbers with a "SF" in the suffix... i.e. SPL250-SF3X)

Permanently lubricated for the life of the product.

* We require relubrication with Spicer® ultra-premium synthetic grease or Chevron Ultra-Duty EP-2 or compatible lithium-based grease meeting N.L.G.I. Grade 2 specifications as well as ASTM D4950 "LB" specifications.

APPLICATION DEFINITIONS: **City** is defined as all applications that require a minimum of 90% of operation time within the city limits. **On-Highway** is defined as all applications requiring less than 10% of operating time on gravel dirt or unpaved roads. **Linehaul** is defined as 100% of operation time on smooth concrete or asphalt. **On/Off-Highway** is defined as all applications operating primarily on paved roads, but requiring more than 10% of operating time on gravel, dirt, or unpaved roads.

Visit our website at www.SpicerParts.com/videos to see how-to videos on proper u-joint kit lubrication procedures.
